What are we looking for-

We are seeking an experienced Data Engineer / Analyst to join our growing data team. The ideal candidate will have 4–6 years of experience bridging data engineering and analysis. This role involves building and optimizing data pipelines, analyzing complex datasets, and translating insights into actionable business decisions. You will play a key role in managing our data infrastructure while supporting data-driven decision-making.

Responsibilities

Data Engineering Focus

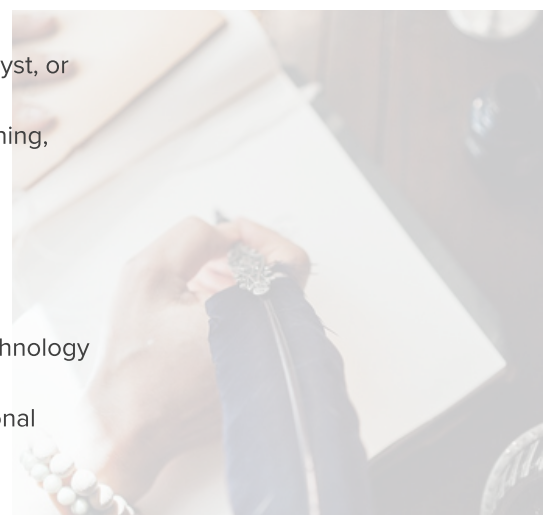

- **Design, construct, install, test, and maintain robust, scalable, and efficient data pipelines** using various ETL/ELT tools and programming languages (e.g., Python, SQL)
- **Manage and optimize our data warehouse/data lake infrastructure** (e.g., Snowflake, AWS Redshift, Google BigQuery, Databricks).
- Develop and implement **data quality checks and monitoring** to ensure data accuracy and reliability.
- Work with cloud services (e.g., **AWS, Azure, GCP**) to manage data storage, compute resources, and data workflows.
- Implement security protocols and measures for data protection and governance.
- **Automate manual data processes** to improve efficiency and reduce latency.

Data Analysis Focus

- **Perform complex data analysis** using SQL and other tools to identify trends, measure performance, and uncover business opportunities.
- **Develop and maintain interactive dashboards and reports** (e.g., Tableau, Power BI, Looker) that effectively communicate key metrics and insights to stakeholders.
- **Translate complex analytical findings** into clear, concise, and compelling narratives and recommendations for non-technical audiences.
- Contribute to **A/B testing analysis** and data-driven product improvement initiatives.

Requirements:

- **4-8 years of professional experience** in a Data Engineering, Data Analyst, or hybrid role.
- **Expert-level proficiency in SQL** for complex querying, performance tuning, and data manipulation.
- **Strong programming skills in Python** (or similar language) for data processing, scripting, and pipeline development.
- Extensive experience with **designing and building scalable ETL/ELT pipelines**.
- Proven experience with at least one major **Cloud Data Warehouse** technology (e.g., Snowflake, Redshift, BigQuery).
- Solid understanding of **data modeling techniques** (e.g., 3NF, Dimensional Modeling, Data Vault).

What is on Offer

- Competitive salary and benefits package (health insurance, paid time off, etc.)
- Well-defined buddy program for every new joiner
- Dedicated mentors to help you learn and perform efficiently in your projects
- On-project deployment from day 1 to help you learn and rise on-the-go
- Conducive work environment that includes festival celebrations, regular events, etc.
- Flexible work hours to maintain work-life balance

Equal Opportunity Commitment

At Arna, we foster an environment where every employee feels valued, respected, and empowered to contribute their unique perspectives and talents to our success. We welcome people from all backgrounds irrespective of their race, color, religion, gender, sexual orientation, national origin, disability, or age.

Next Steps

If you are passionate about being a part of a company that is growing rapidly, we would love to hear back from you. Please fill out a short form by clicking on the following URL.
