What are we looking for-

We are seeking an experienced Azure DevOps Engineer with 4+ years of experience in managing CI/CD pipelines, cloud infrastructure, and deployment automation. The ideal candidate should have strong hands-on experience with Azure DevOps, Azure services, Git, Infrastructure as Code (IaC), and scripting, along with the ability to troubleshoot deployment issues and optimize development and release processes.

Our main focus is on CI/CD automation, Azure infrastructure management, deployment troubleshooting, monitoring, and implementing best practices to improve system reliability, security, scalability, and performance.

Responsibilities

- Monitor application health and investigate production issues using **Datadog, Azure Monitor,** Application Insights, and KQL.
- Perform root cause analysis and **troubleshoot application, infrastructure, and database** issues.
- Analyze application performance, **API response times, SQL queries**, and infrastructure utilization to **identify bottlenecks.**
- Manage **CI/CD pipelines, automate deployments,** and handle releases using Azure DevOps, YAML, and Git.
- Manage and troubleshoot Azure services, including **Azure App Services, Azure SQ**L, and related infrastructure.
- Manage **network traffic, load balancing, Web Application Firewalls (WAF), content delivery,** and capacity planning.
- Manage backups, replication, failover, disaster recovery, and recovery testing to ensure high availability.
- Manage containerized applications using **Docker and Kubernetes (AKS).**
- Automate infrastructure provisioning and configuration management using **Terraform, Ansible, and PowerShell.**
- Ensure security, scalability, and reliability while collaborating with development teams to resolve issues and optimize production environments using tools such as Elastic and Cloudflare or comparable technologies.

Requirements:

- **4–8 years of hands-on experience in Azure DevOps with strong expertise in Azure cloud services.**
- Strong experience with **CI/CD, Azure DevOps, YAML pipelines, Git,** and release management.
- Hands-on experience with **Azure App Services, Azure SQL, Azure Monitor,** and Application Insights.
- Knowledge of monitoring tools such as **Datadog, Log Analytics, and KQL,** along with application performance monitoring and troubleshooting.
- Strong **SQL/T-SQL skills**, including query optimization and performance analysis.
- Experience with **Docker and Kubernetes (AKS).**
- Proficiency in Infrastructure as Code (IaC) tools such as **Terraform, Azure Bicep, and ARM** templates.

- Scripting experience with PowerShell, Bash, or Python.
- Experience supporting **.NET / ASP.NET** Core applications.
- Knowledge of Azure Key Vault, Managed Identity, and Azure networking.
- Familiarity with **Grafana, Prometheus, DevSecOps practices,** high availability, and performance optimization.

What is on Offer

- Competitive salary and benefits package (health insurance, paid time off) etc.
- Open work culture that encourages you to excel, and explore the latest technology stack.
- Opportunity to take ownership and make decisions with the support of experienced leadership.
- Flexible working hours to support productivity and maintain a healthy work-life balance.

Equal Opportunity Commitment

At Arna, we foster an environment where every employee feels valued, respected, and empowered to contribute their unique perspectives and talents to our success. We welcome people from all backgrounds irrespective of their race, color, religion, gender, sexual orientation, national origin, disability, or age.
